Increase the energy effectiveness of the Hospital
and High school "Vasil Levski" in Ardino

Introductory conference for the presentation of the project "Increase the energy effectiveness and renewable energy use in municipal buildings and local systems of “Hospital-Ardino” Ltd. and the High school "Vasil Levski" in Ardino was hold in the conference hall of the municipality.

The project is funded under the program BG04 "Energy effectiveness and renewable energy" (ie. The Norwegian program) Grant Scheme BG 04-02-03 "Increase the energy effectiveness and use of renewable energy in municipal and state buildings and local heating systems".

There were Deputy mayors, representatives of "Hospital-Ardino" Ltd. and the High school "Vasil Levski". With multimedia presentation all those present were familiarized with the aim of starting projects, namely reducing greenhouse gas emissions and air pollution.

In the "Hospital-Ardino" project aims to replace the all heating system of the hospital. With the implementation of the project provided energy effectiveness measures the expected reduction in CO2 emissions is 90.4 t / yr. Baseline is 186.5 t / yr., after the implementation of the project will be 96.1 t / yr.

In High school "Vasil Levski" project aims to replace the all heating system of the school and the gym, as well as complete reconstruction of the ventilation system of the sports hall. With the implementation of the project provided energy effectiveness measures in the building of the school the expected reduction in CO2 emissions is 38.11 t / yr. Baseline was 86.6 t / yr., after the implementation of the project will be 48.49 t / yr.

The project’s worth is 488 229.01 leva and the deadline for implementation of the project activities is 18 August 2016. Under the requirements of the Public Procurement Act will be announced a procedure for award of a contract for the implementation of activities.
